

# LuciFind™ 6.0 – Advanced Search for IBM Workplace Web Content Management 5.1 & 6.0

*Provides advanced searching functionality to IBM Web Content Management allowing end users to target the right content at the right time.*

## Features

- Offers brand new advanced functionality for searching.
- Fast installation using an AutoConfig option.
- Searches both secure and public IBM Workplace Web Content Management content – suitable for all types of internet and intranet sites.
- Searches attachments including DOC, XLS, PPT, PDF, RTF, TXT.
- Reduces duplicate and irrelevant results by excluding common blocks of HTML from the indexing process.
- Flexible searching, sorting and grouping options including searching by dates and custom fields.
- Find content faster by restricting results to the current site area only, by category or document type.
- Automatic highlighting of user search query terms in HTML and attachments.

*Various screens of the LuciFind Administration Portlet provide clear status information.*

### The challenge of Finding Content

After spending a large amount of time and resources creating your website in IBM® Workplace Web Content Management software, you discover that your web users are finding it difficult to locate published content. They either can't find their content or they can't find their content as easily as they would like. Some of your business searching requirements may have been "optional" when evaluating the software, but are

now seen as "mandatory". This is where LuciFind™ can bridge the gap. After evaluating many customer's searching requirements, LuciFind™ has been built from an end-user's point-of-view. Users may want to restrict content to a particular sitearea, search attachments or be able to search for content between dates – LuciFind™ supports it.

### **Fast configuration eases installation**

LuciFind™ is designed to install quickly and operate silently in the background with minimal intervention. Complex schedules can be configured to automatically update and rebuild indexes – Indexes can also be updated or rebuilt manually if required.

### **Leverage IBM Workplace Web Content Management features**

LuciFind™ is written specifically for IBM® Workplace Web Content Management™ software and is designed to optimise the end-user experience. Authoring Templates often contain multiple custom fields which are used to store event dates / times, separate fields for company address information, or caption text for photographs. While all of these fields are inaccessible to the standard IBM Portal Search, LuciFind™ indexes each one and also makes them accessible via the search results layouts .

### **Avoid Single Point of Failures**

LuciFind™ uses individual indexes to avoid a single-point-of-failure with a clustered index. This also ensures that each search index reflects the syndicated IBM Workplace Web Content Management database instance.

### **Target and display content faster**

Restricting content searches to a particular sitearea of an IBM® Workplace Web Content Management website is often critical in locating content quickly. LuciFind™ allows both searching of the current sitearea, as well as searching of the current sitearea and it's descendents. This means that searches within the *News* section can be restricted to only *News* or *News* and it's sub-siteareas of *Archive*, *World*, *Local*, and *Financial*. LuciFind also provides a Grouping feature, which allows search results to be grouped by sitearea, by category or any other indexed field.

### **Expert proven assistance — whenever and wherever you need it**

If you require assistance with IBM Workplace Web Content Management software, ask an expert. As the author, Pete Raleigh not only has experience in LuciFind™, but also over 7 years experience using IBM Workplace Web Content Management. Pete has worked for many clients throughout the world assisting with installations, implementations and migrations of existing websites into IBM Workplace Web Content Management.

### **What do you want LuciFind™ to do?**

The extensive set of searching capabilities offered by LuciFind™ aims to extract the best possible value from the IBM Workplace Web Content Management software. LuciFind™ can be further enhanced through customisations to fit specific industries or customer needs. It's development is not management driven, it's customer driven. If you have a specific requirement, we'd like to hear about it. Email us at: [requests@lucifind.com](mailto:requests@lucifind.com) All feature requests will listed on our website forum and available for customers to vote on.
